The Educational Policy of Aoyama Gakuin

Aoyama Gakuin has as its aim
education based upon the Christian faith
and as its purpose the building up of persons
who live in sincerity before God,
who seek for truth with humility,
and who actively take responsibility
for all people and for society
in a spirit of love and service.

The Mission of Aoyama Gakuin University

Aoyama Gakuin University is an educational and research institution based on the Educational Policy of Aoyama Gakuin which is to serve God and persons, contributing to society as the Salt of the Earth and Light of the World.

Our institution nurtures persons who, with a sound understanding based on global perspectives, possess the wisdom and strength with which to discover and solve issues personally. This is achieved through a wide range of barrier free academic research that pursues service and commitment to humanity.

With respect for one another and the traditions of our institution, all faculty members, personnel and students are making an effort towards the creation of a university that is able to respond to the needs of its era.

Program Overview

[1] Time and Year of Entrance

The admission will be in October 2023.

*Orientation and classes begin in mid-September, so if accepted, you should arrive in Japan in early September.

[2] Duration

The duration of the Doctor's program will be three years of full-time study.

[3] Awarded Degree

Graduate Students may pursue studies leading to any of the following degrees:

Doctor of Science

Doctor of Engineering

[4] Course Details

The Graduate School of Science and Engineering consists of one department, the Department of Science and Engineering, which includes the following eight Courses.

(1) Fundamental Science Course: **Not accepting applications**

Focusing in particular on mathematical science, materials science, solid-state physics, astrophysics, and atomic, molecular, and plasma physics, the course is planned to serve students with a broad spectrum of interests and objectives in the natural science. Also, the course is extending to new fields such as complex systems, strongly correlated quantum systems, physics of friction, earthquake, etc. The specialty studies cultivate the students' ability to build models for a range of issues and solve problems.

(2) Chemistry Course:

The course consists of three fields: physical chemistry, organic chemistry and inorganic analytical chemistry. Focusing on a wide range of molecular systems that include individual molecules and tissues showing organic functions and many other functions, the course bases its studies on the primary viewpoint of chemistry and broadens and deepens the students' knowledge of chemistry.

(3) Materials Science Course:

Focusing on the creation of substances with new functions, the course provides comprehensive studies concerning material design, device manufacture and other applications. Based on material physics, solid-state chemistry, materials science, thin-film engineering, electrical engineering and

other fields, the course trains future leaders of most advanced materials science who are well informed on a broad range of issues.

(4) Biological Science Course: Not accepting applications

The rapid progress in biological science is not only expanding new frontiers of science and technology, but also beginning to influence the human society. The aim of the Biological Science Course is to provide students with fundamental knowledge of molecular biology as a common basis to work in this wide field and to develop abilities to plan and carry out research on their own by joining the ongoing research on the structure, function and regulation of the biological molecules. Taking advantage of being a member of The Graduate School of Science and Engineering, we also encourage students to take part in the technical advancements in this field.

(5) Electrical Engineering and Electronics Course:

A broad range of laboratories, including circuit systems, communication theory, and materials accept graduate students. With the aim of establishing themselves as engineers and researchers, the students are focused on fields that support the foundation of modern societies and include energies, measurement / control, information / communications, electronic devices, materials and any related fields. Emphasis is placed on directed research and, in the process; we endeavor to provide students with the ability to think independently make discoveries and solve problems. Students advancing to the course need clear study goals to establish themselves as engineers and researchers.

(6) Mechanical Engineering Course: Not accepting applications

This course trains engineers and researchers who will contribute to the sustainable development of humanity by creating instruments and systems with superior performance. In other words, students base their studies on a broad range of viewpoints, such as energy, environment, safety and ethics, while deepening their understanding of shapes, mechanisms, and the dynamic actions of materials. Combining a range of factors, such as machines and intelligence, the course enables students to acquire advanced skills in information processing, measurement and analysis. The research and guidance foster comprehensive skills in the students, enabling them to identify and solve problems.

(7) Intelligence and Information Course:

Education and research in the Intelligence and Information Course covers a wide range of computer and information related topics including human-computer interaction, natural language understanding, big data, computer vision, robotics, wearable devices, and network and web technology. The goal is to learn to create and master new technologies as well as to understand their role in human society.

(8) Management Technology Course:

The course teaches advanced management technologies applied in production systems, supply chain, business management, environmental management, quality management, and other related areas. By conceptualizing those technologies, the course emphasizes advanced data analysis, system modeling, and optimization techniques. The course enables students to acquire deep understanding the essence of advanced Japanese management systems, such as production systems, total quality management.

How to Apply

[1] Requirements for Application

Students who will apply and be accepted to the Graduate School International Doctor's Program can graduate from the Program by taking English courses conducted in English only.

Students with the following circumstances are eligible:

1. Those whom have obtained a Master's degree or professional degree, or those whom are expected to receive one by August 2023.
2. Those whom obtained a degree equivalent to a Master's degree or professional degree outside Japan or those whom are expected to receive one by August 2023.
3. Those designated by the Minister of Education, Culture, Sports, Science and Technology.
4. Those who completed the course designated by the Minister of Education, Culture, Sports, Science and Technology and received a degree equivalent to a Master's degree or professional degree at an educational facility in Japan positioned in a foreign school education system as having graduated from a course at a graduate school outside Japan and are expected to receive one by August, 2023.
5. Those who take and pass the examination administered by the Ministry of Education, Culture, Sports, Science and Technology (MEXT) proving that they have an academic ability equal to or greater than those who have a Master's degree.
6. Those who prove they have an academic ability equal to or greater than those who have Master's degree or professional degree by taking the individual examination for entrance eligibility at Aoyama Gakuin University and who are aged 24 years or older by the time of entrance.

In regards to point 6 for entrance examination, either of the following requirements must be met.

- ① Those who have at least 2 years of experience in the field of science and technology and demonstrate sufficient achievement after graduating from a university or completing a 16 years

of education at accredited educational institutions outside of Japan.

- ② Those who have a research achievement which has demonstrated to have a value equal to or greater than that of a Master's thesis through books, academic papers, academic lectures, academic reports or patents.

Applicants should contact the research advisor to discuss his/her research plan, prior to the submission of application documents. (*1) If the email address of the desired research advisor is not on the Aoyama Gakuin University website, please contact us via email (in-rikou@aoyamagakuin.jp).

Applicants are required to acquire or renew their status of residence as “Student” which is defined in the Immigration Control and Refugee Recognition Act.

(*1) Please refer to the list of faculty members from [here](#). For the email address of each professor, please contact us via email (in-rikou@aoyamagakuin.jp)
